

SPLASH FUN AND RUN – WATERPLAY FOR KIDS

SPORTBAU CANADA LIMITED offers a solution to your surfacing problems in the Water Park and primarily in the children's water play area. Through the installation of solvent-free, two component polyurethane, resilience and slip resistance can be provided to the surface. The surface is call CHAMP-TRACK. This system is resistant to normal concentrations of swimming pool chemicals and since it has a more than 15 year history as a running track and recreation surface, it is unmatched.

CHAMP-TRACK 's chemicals are mixed and poured at the site of installation. It will thoroughly bond to asphalt, concrete and many synthetics that currently cover the surface of the water play area. It will follow the contours of the sub-surface without unsightly seams or joints. Once the liquid polyurethane is spread, a coloured EPDM rubber granule is cast into the surface to provide excellent slip resistance.

Being a liquid and poured on site, the CHAMP-TRACK eliminates the problems associated with porous and prefabricated materials. There is no opportunity for the harbouring and growth of algae, or other microorganisms. Surface contamination and therefore shutdown of the facility will not occur with the impermeable surface. CHAMP-TRACK is a worry free system that will require no maintenance for many years. CHAMP-TRACK meets the requirement that synthetic surfaces match an impermeable base with the impermeable surface.

CHAMP-TRACK is available in red, green or blue, with special colours available on request. The size of the rubber granule can be varied to allow for changes in texture.

SPORTBAU CANADA LIMITED can provide pre-budget, planning and surface selection assistance.
